Pressure transmitters for heavy-duty applications Types MBS 2000 and MBS 2050

The compact heavy duty pressure transmitters MBS 2000 and MBS 2050 are designed for use in hydraulic applications.

MBS 2050 with integrated pulse-snubber is designed for use in applications with severe medium influences like cavitation, liquid hammer or pressure peaks. Both types offer a reliable pressure measurement, even under harsh environmental conditions.

The flexible program of pressure transmitters with ratiometric output signal covers absolute or gauge (relative) versions, measuring ranges from 0 – 1 to 0 – 600 bar and a wide range of pressure and electrical connections.

A robust design, an excellent vibration stability and a high degree of EMC/EMI protection equip the pressure transmitter to meet the most stringent industrial requirements.

Features

- Designed for use in severe industrial environments
- Protected against cavitation, liquid hammering and pressure peaks (MBS 2050)
- Enclosure and wetted parts of acid-resistant stainless steel (AISI 316L)
- Pressure ranges in relative (gauge) or absolute upto 600 bar
- Ratiometric output signal: 10 – 90% of supply voltage
- A wide range of pressure and electrical connections
- Temperature compensated and laser calibrated
- For use in Zone 2 explosive atmospheres

Application and media conditions (MBS 2050)

Application

Cavitation, liquid hammer and pressure peaks may occur in hydraulic systems with changes in flow velocity, e.g. fast closing of a valve or pump starts and stops.

The problem may occur on the inlet and outlet side, even at rather low operating pressures.

Media condition

Clogging of the nozzle may occur in liquids containing particles. Mounting the transmitter in an upright position minimizes the risk of clogging, because the flow in the nozzle is limited to the start-up period until the dead volume behind the nozzle orifice is filled. The media viscosity has only little effect on the response time. Even at a viscosities up to 100 cSt, the response time will not exceed 4 ms.

Technical data

Performance (EN 60770)

Accuracy (incl. non-linearity, hysteresis and repeatability)	$\leq \pm 0.5\%$ FS (typ.)
	$\leq \pm 1.0\%$ FS (max.)
Non-linearity BFSL (conformity)	$\leq \pm 0.2\%$ FS
Hysteresis and repeatability	$\leq \pm 0.1\%$ FS
Thermal zero point shift	$\leq \pm 0.1\%$ FS/10K (typ.)
	$\leq \pm 0.2\%$ FS/10K (max.)
Thermal sensitivity (span) shift	$\leq \pm 0.1\%$ FS/10K (typ.)
	$\leq \pm 0.2\%$ FS/10K (max.)
Response time	Liquids with viscosity < 100 cSt
	Air and gases (MBS 2050)
Overload pressure (static)	$6 \times$ FS (max. 1500 bar)
Burst pressure	$6 \times$ FS (max. 2000 bar)
Durability, P: 10 – 90% FS	$> 10 \times 10^6$ cycles

Electrical specifications

Nom. output signal	10 – 90% of $[U_b]$
Supply voltage $[U_b]$, polarity protected	4.75 – 8 V d.c. 5 V d.c. (nom.)
Power consumption	≤ 5 mA at 5 V d.c.
Output impedance	$\leq 25 \Omega$
Load Resistance $[R_L]$	$R_L \geq 10$ k Ω at 5 V d.c.

(continued)*Environmental conditions*

Sensor temperature range	Normal	-40 – 85 °C
	ATEX Zone 2	-10 – 85 °C
Media temperature range	115 - (0.35 x ambient temperature)	
Ambient temperature range (depending on electrical connection)	See page 6	
Compensated temperature range	0 – 80 °C	
Transport / storage temperature range	-50 – 85 °C	
EMC – Emission	EN 61000-6-3	
EMC – Immunity	EN 61000-6-2	
Insulation resistance	> 100 MΩ at 100 V d.c.	
Mains frequency test	Based on SEN 361503	
Vibration stability	Sinusoidal	15.9 mm-pp, 5 Hz-25 Hz 20 g, 25 Hz – 2 kHz
	Random	7.5 g _{rms} , 5 Hz – 1 kHz
Shock resistance	Shock	500 g / 1 ms
	Free fall	1 m
Enclosure (depending on electrical connection)	See page 6	

Explosive atmospheres

Zone 2 applications		EN60079-0; EN60079-15
---------------------	---	-----------------------

In ATEX Zone 2 applications with temperatures < -10 °C cable and plug must be protected against impact.

Mechanical characteristics
