FIS GAS SENSOR SB-12A

for METHANE DETECTION

The SB-12A is a tin dioxide semiconductor gas sensor which has an excellent performance in methane detection with significant low power consumption concept (120 mW). High sensitivity, low sensitivity to noise gases, quick response speed and strong poisoning resistance features achieve reliable gas detection system applications.

Structure

Gas sensitive semiconductor material is a mini bead type and a heater coil and electrode wire are embedded in the element. The sensing element is installed in the metal housing which uses double stainless steel mesh (100 mesh) in the path of gas flow. This sensor unit is placed in an external housing which contains active charcoal filter (Fig 1).

Operating conditions

Fig 2 shows the standard operating circuit for this model. The change of the sensor resistance (RS) is obtained as the change of the output voltage across the fixed or variable resistor (RL). In order to obtain the best performance and specified characteristics, the values of the heater voltage (VH) circuit voltage (VC) and load resistance (RL) must be within the range of values given in the standard operating conditions shown in the Specification table on the next page.

Sensitivity characteristics

Fig 3 shows the sensitivity characteristics curves of the SB-12A (typical data). Sensitivity characteristics of the FIS gas sensors are expressed by the relationship between the sensor resistance and gas concentration. The sensor resistance decreases with an increase of gas concentration based on a logarithmic function.

The sensitivity characteristics of the SB-12A is specified by the following parameters.

- Sensor resistance at methane 3000 ppm
- Sensor resistance change ratio: between methane 1000 ppm and 3000 ppm (slope)
- Sensor resistance change ratio: between methane 3000 ppm and ethanol 1000 ppm.

Specifications

A. Standard Operating conditions

| Symbol | Parameter | Specification | Conditions etc. |
|----------------|--------------------------|-----------------------------|--|
| V_{H} | Heater voltage | 0.9 V ± 0.05 V | AC, DC or pulse |
| V _C | Circuit voltage | Less than 5 V | DC: Pin2 (+) - Pin 1 (-) |
| R_L | Load resistance | Variable (> 200 Ω) | P _S < 10 mW |
| R _H | Heater resistance | $2.8 \Omega \pm 0.2 \Omega$ | at room temperature |
| I _H | Heater current | 132 mA | I _H = V _H / R _H (typical value) |
| P _H | Heater power consumption | 120 mW | $P_{H} = V_{H}^{2} / R_{H}$ (typical value) |

B. Environmental conditions

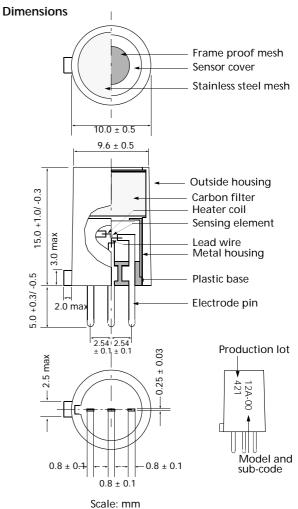

| Symbol | Parameter | Specification | Conditions etc. |
|-------------------|-----------------------|--|---------------------------------------|
| Tao | Operating temperature | -10 °C to 50 °C | |
| Tas | Storage temp | -30 °C to 100 °C | Recommended range |
| RH | Relative humidity | Less than 95% RH | |
| (O ₂) | Oxygen concentration | 21% ± 1% (Standard condition) | Absolute minimum level: more than 18% |
| | | The sensitivity characteristics are influenced by the variation in oxygen concentration. | |

C. Sensitivity characteristics

| Model | SB-12A-00 | | |
|------------------------------------|-------------------|--|---|
| Symbol | Parameter | Specification | Conditions etc. |
| R_S | Sensor resistance | 0.2kΩ to 1.0kΩ | at CH ₄ 3000 ppm |
| β | Slope | 0.45 to 0.65 | Rs (at CH ₄ 3000 ppm) |
| , | | | Rs (at CH ₄ 1000 ppm) |
| Ethanol selectivity | | ≥ 5.0 | Rs (at C ₂ H ₅ OH 1000 ppm) |
| | | | Rs (at CH ₄ 3000 ppm) |
| Sensitivity of CH4 | | ≥ 9.0 | Rs (in air) |
| | | | Rs (at CH ₄ 3000 ppm) |
| Standard Test Conditions: | | Temp: $20 ^{\circ}\text{C} \pm 2 ^{\circ}\text{C}$ Humidity: $65\% \pm 5\%$ (in clean air) | |
| Pre-heating time: more than 4 days | | | |
| Low temperature dependency | | 1.2 ± 0.2 | Rs (CH ₄ 3000 ppm at -10°C) |
| | | | Rs (CH ₄ 3000 ppm at 20°C65%) |
| High temperature dependency | | 0.85 ± 0.15 | Rs (CH ₄ 3000 ppm at 50 °C60%) |
| | | | Rs (CH ₄ 3000 ppm at 20°C65%) |

D. Mechanical characteristics

| Items | Conditions | | Specifications |
|-----------|--------------------------------------|--------------------------------|--|
| Vibration | Frequency: Acceleration: Sweep Time: | 5 - 500 Hz 1.3 G 40 min. | Should satisfy the specifications shown in the sensitivity characteristics after |
| Drop | Height: Number of impacts: | 60 cm 3 times | test. |

Weight: 1.2g

E. Parts and Materials

| No. | Parts | Materials |
|-----|------------------------|----------------------------------|
| 1. | Sensing element | Tin dioxide |
| 2. | Heater coil/ Lead wire | Platinum |
| 3. | Stainless steel mesh | SUS 316 (100 mesh, single) |
| 4. | Carbon filter | Activated carbon |
| 5. | Outside housing | Nylon 6 (UL94 V-0) |
| 6. | Flameproof mesh | SUS 316 (100 mesh, double) |
| 7. | Metal housing | Nickel plated brass |
| 8. | Plastic base | PBT (poly butylene telephtalate) |
