UV SENSOR "UV-DVGW" UV Sensor for DVGW certified water purifiers

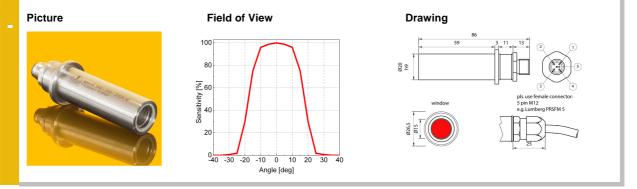

UV Sensor "UV-DVGW"

UV Sensor for DVGW certified water purifiers

The sensor UV-DVGW is a special type suitable for use with DVGW certified water purifiers. It complies with the standard DVGW W294-3(2006). Always delivered calibrated according to DVGW requirements.

The probe is amplified and shielded against electromagnetic interference. The visible blind sensors are based on a Silicon Carbide (SiC) UV photodiode, which guarantees highest radiation hardness, long term stability and $>10^{10}$ visible blindness (ratio of UV to VIS-IR sensitivity). Blue and GaP type sensors are based on a Galliumphosphide (GaP) UV photodiode. Please find at page 2 an individual configuration procedure which allows the prospective user to select the correct spectral response (STEP 1), different output types (STEP 2) and to select a sensitivity range (STEP 3).

Specifications

| Fixed Specifications | | Configurable Specifications | | |
|----------------------|--|--|---|--|
| Parameter | Value | Parameter | Value | |
| Dimensions | pls. refer to the drawing | Absolute Sensitivity | 1nW/cm ² 10W/cm ² | |
| Weight | 120 g | Spectral Sensitivity | UVC | |
| Temp. Coefficient | 0,035%/K | Signal Output | 05V, 420mA, USB | |
| Operating Temp. | -20+80°C | Connections | 2m cable or 2m cable with 5 pin male connector type Lumberg PRSFM5 | |
| Humidity | <80%, non condensing, on request: 100% submersible | Please find the configuration guide at page 2 of this datasheet. | | |

Monitor Accessories

000

Please consider our UV monitor and UV controller offer.

Calibration

We are pleased to issue an individual quotation for NIST or PTB traceable calibration.

UV SENSOR "UV-DVGW" UV Sensor for DVGW certified water purifiers

| STEP 1 → Configuration of the Spectral Sensitivity | | | | | | |
|--|--|---|--|--|--|--|
| ₩ please select | | | | | | |
| 1,0 | 3 <u>68</u> Y | UVC (SiC) UV Broadband (SiC) UVB / Erythema (SiC) UVA (SiC) Blue (GaP) GaP | | | | |
| 0,6 0,6 0,6 0,0 0,0 0,0 0,0 0,0 0,0 0,0 | 5 5 7 7 7 7 7 7 7 7 7 7 | 25 450 475 500 525 550 | 575 600 | | | |
| Wavelength ג [nm] Please select one spectral sensitivity curve. | | | | | | |
| STEP 2 → Signal Output Please tick your selection. The pin configuration is shown in the drawings on page 1. | | | | | | |
| Output Type | Description | Connection = "cable" | Connection = "male plug" | | | |
| O 05∨ | 05V voltage output proportional to radiation input, supply voltage is 724VDC, current consumption is <30mA | O V ₀ =brown, V ₊ =white, Out=green, Shield=black | O V ₀ =1, V ₊ =2, Out=3 | | | |
| Ŭ | 420mA current loop for PLC controllers. The current is proportional to the radiation, supply voltage is 24VDC | $ \bigcirc V_0 = brown, V_+ = white \\$ | O V₀=1, V₊=2 | | | |
| | The signal is transmitted via USB to a computer. Software is included. | > | O Standard USB-A plug, 1,5 m cable | | | |
| Ŭ | UV pulse counting for pulses > 30ns, signal out is 5V when the pulse intensity is above threshold and 0V when below. | O V₀=brown, V₄=white, Out=green, Shield=black | O V ₀ =1, V ₊ =2, Out=3 | | | |
| STEP 3 \rightarrow S | Sensitivity | | | | | |
| We configure your UV sensor for intensities across 10 orders of magnitude from 1nW/cm ² to 10W/cm ² . For good dynamic behaviour the min and max. intensity at the probe position needs to be known as precisely as possible. Please fill that value, if known, into the box below. If only a rough estimate is possible, please estimate it in the range selection fields. We will contact you for further refinement of the range. | | | | | | |
| max. radiation | n in mW/cm ² or, if not precisely known, range | e estimation | | | | |
| 0 | $\Box \qquad 1 nW/cm^2 \dots 10 \mu W/cm^2 \qquad \bigcirc$ | 10µW/cm ² 100mW/cn | 100mW/cm ² 10W/cm ² | | | |
| Probe mechanical design overview Besides the ticked mechanical design of this datasheet other mechanical designs are available | | | | | | |
| 🗶 Туре | Description | | | | | |
