

UV LED based Fluorometer-Spectrometer

- Single or multiple wavelength(s) from 240nm to 365nm*
- Multiple wavelengths can be individually addressable
- Detector installed from 200nm to 850nm
- Complete software available
- Total digital control of spectral distribution
- Turn-on and turn-off time of the whole spectrum within nanoseconds
- Multi-wavelength fiber coupled probes for in-vivo analysis
- Optional high current short-pulse driver available

Wavelengths adjustable with complete software package

* Wavelengths longer than 365nm, can be sourced and integrated on request
