Model 3129-121

Tension/Compression Canister Load Cell

DESCRIPTION

The Model 3129-121 fatigue-resistant load cells are extremely resistant to extraneous bending and side loading forces. The structure virtually eliminates bending strains at the strain gage,

minimizing the primary cause of load cell failure. Dual bridge option available for feedback control and redundancy.

FEATURES

- Optional dual bridge (not shown)
- Metric threads (English threads available: 3129-112)
- Resist fatigue failure
- Multi-beam structure design
- 1500000 N capacity
- Bending moment resistance of 840000 lb inches
- 65000 lb of shear resistance
