

**AWS5522**

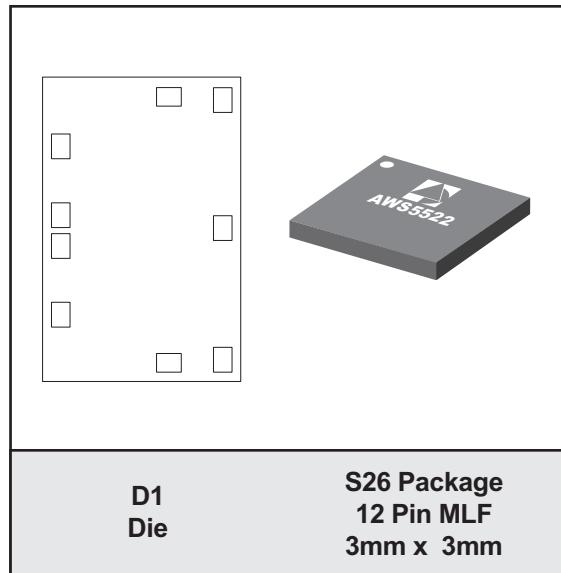

0.5 to 2.5 GHz SPDT Switch
ADVANCED PRODUCT INFORMATION - Rev 0.1

FEATURES

- Low Insertion Loss: 0.5 dB at 2 GHz
- High Isolation: > 25 dB
- Low Harmonic Levels: < -65 dBc
- Low Control Voltage Operation: to +2.5 V
- Low Profile Surface Mount Package

APPLICATIONS

- GSM Wireless Handsets and Front-end Modules
- CDMA Wireless Handsets and Front-end Modules

PRODUCT DESCRIPTION

The AWS5522 is a single pole, double throw (SPDT) RF switch developed to meet the stringent requirements of GSM and CDMA systems. Manufactured in ANADIGICS's state-of-the-art pHEMT process, the device uses patent-pending

circuit topologies to provide the low insertion loss, high port-to-port isolation and high linearity needed to enhance the performance of wireless handset radios. The AWS5522 is offered both as an MMIC die and in a 12-lead 3mm x 3mm MLF package.

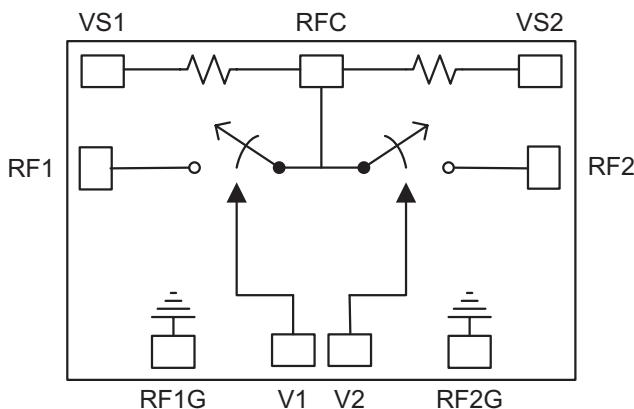

Figure 1: Block Diagram

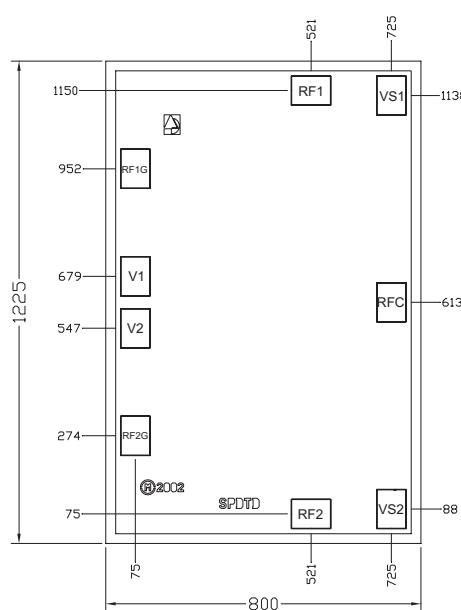

Figure 2 : Die Configuration

Table 1 : Pad Description

NAME	DESCRIPTION
VS1	Common port bias voltage (logic high)
RF1	RF port, path 1
RF1G	Ground
V1	Control voltage, RF path 1
V2	Control voltage, RF path 2
RF2G	Ground
RF2	RF port, path 2
VS2	Common port bias voltage (logic high)
RFC	RF common port

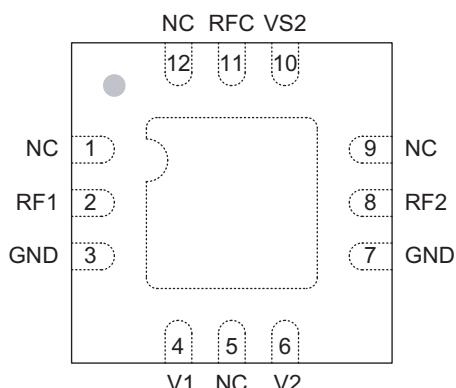

Figure 3: Packaged Device Pinout (X-ray Top View)

Table 2: Pin Description

PIN	NAME	DESCRIPTION
2	RF1	RF port, path 1
4	V1	Control voltage, RF path 1
6	V2	Control voltage, RF path 2
8	RF2	RF port, path 2
10	VS2	Common port bias Voltage (logic high)
11	RFC	RF common port
3, 7	GND	Ground
1, 5, 9, 12	NC	No connection

ELECTRICAL CHARACTERISTICS**Table 3: Absolute Minimum and Maximum Ratings**

PARAMETER	MIN	MAX	UNIT	COMMENTS
Common Port Bias Voltage (V_S)	-0.2	+8.0	V	at VS1 or VS2 ⁽¹⁾
Control Voltages (V_1, V_2)	-0.2	+8.0	V	
RF Input Power (P_{IN})	-	10	W	at RF1, RF2 and RFC
Storage Temperature ⁽²⁾	-65	+150	°C	

Stresses in excess of the absolute ratings may cause permanent damage. Functional operation is not implied under these conditions. Exposure to absolute ratings for extended periods of time may adversely affect reliability.

Notes:

- (1) The VS1 and VS2 ports may remain open-circuited without damage to the device.
- (2) Storage Temperature limits apply to the die only after it has been removed from the ANADIGICS shipping material. (The limits apply at all times for the packaged device.)
- 3. The RF1, RF2 and RFC ports should be AC-coupled. No external DC bias should be applied.

Table 4: Operating Ranges

PARAMETER	MIN	TYP	MAX	UNIT	COMMENTS
RF Frequency (f)	0.5	-	2.5	GHz	
Common Port Bias Voltage (V_S)		⁽¹⁾			applied at either VS1 or VS2 port
Control Voltages (V_1, V_2)	0 +2.5	- -	+0.2 +3.5	V	RF path OFF state RF path ON state
Ambient Temperature (T_A)	-30	-	+85	°C	

The device may be operated safely over these conditions; however, parametric performance is guaranteed only over the conditions defined in the electrical specifications.

Notes:

- (1) For optimal linearity performance, the Common Port Bias Voltage (V_S) should be set to the same Control Voltage used to turn ON either of the individual RF paths. The VS1 and VS2 ports may remain open-circuited without damage to the device, but with some degradation in linearity.

Table 5: Electrical Specifications - Unpackaged Die

($T_A = +25^\circ\text{C}$; RF ports terminated with 50Ω ; $V_n = +2.7 \text{ V}$ and is the Control Voltage for the ON path, RFC-RFn; $V_x = 0 \text{ V}$ and is the Control Voltage for the OFF path, RFC-RFx)

PARAMETER	MIN	TYP	MAX	UNIT	COMMENTS
Insertion Loss 1 GHz 2 GHz	- -	0.4 0.5	0.6 0.8	dB	RFC port to selected RFn port
Return Loss ⁽¹⁾ 1 GHz 2 GHz	- -	-30 -32	-20 -20	dB	RFC port and selected RFn port
Isolation 1 GHz 2 GHz	25 25	27 27	- -	dB	RFC port to isolated RFx port
Input Third Order Intercept ⁽²⁾ 800 MHz Cellular Band 1900 MHz PCS Band	- -	+60 +59	- -	dBm	RFC port to selected RFn port
2nd Harmonic Rejection ⁽³⁾ 1 GHz 2 GHz	- -	-79 -78	-65 -65	dbc	$P_{IN} = +34 \text{ dBm}$ $P_{IN} = +32 \text{ dBm}$
3rd Harmonic Rejection ⁽³⁾ 1 GHz 2 GHz	- -	-88 -81	-65 -65	dbc	$P_{IN} = +34 \text{ dBm}$ $P_{IN} = +32 \text{ dBm}$
Current Consumption	- -	- -	30 5	μA μA	each V_n port VS1 or VS2 port

Notes:

(1) The isolated RFx port has a return loss of approximately -3 dB.

(2) For the Cellular Band, two tones with $P_{IN} = +22.5 \text{ dBm}$ each, at 900.0 and 900.1 MHz. For the PCS Band, two tones with $P_{IN} = +21 \text{ dBm}$ each, at 1900.0 and 1900.1 MHz.

(3) $V_s = V_n$

Table 6: Switch Control Truth Table

CONTROL VOLTAGES		RF PATH SELECTION	
V_1	V_2	RFC - RF1	RFC - RF2
+2.5 to +3.5 V	0 to +0.2 V	ON	OFF
0 to +0.2 V	+2.5 to +3.5V	OFF	ON

Table 7: Electrical Specifications - Packaged Device
 $(T_A = +25^\circ C)$; RF ports terminated with 50Ω ; $V_n = +2.7 V$ and is the Control Voltage
 for the ON path, RFC-RFn; $V_x = 0 V$ and is the Control Voltage for the OFF path, RFC-RFx)

PARAMETER	MIN	TYP	MAX	UNIT	COMMENTS

APPLICATION INFORMATION**Unpackaged Die Applications**

Bonding and circuit connections for the unpackaged AWS5522 die are shown in Figure 14, and application details are listed in the following notes:

1. C_b are DC blocking capacitors external to the device. A value of 100pF is sufficient for operation to 500MHz. The values may be tailored to provide specific electrical responses. The isolation of the switch provides enough decoupling of the RF1 and RF2 ports so that overall switch performance is not affected.

2. The VS1 and VS2 pins provides a fixed voltage potential to the common port of the switch. To get the best linear performance, either VS1 or VS2 should be tied to the logic high voltage potential (not the power supply). Only one of these pins need be attached, with the decision determined by external circuit layout. Current draw on this pin is less than 5µA.

3. The RF Ground bondwires should be kept as short as possible and bonded directly to a good RF ground for best broadband performance.

4. L_{ESD} provides a means to increase the ESD protection on a specific RF port, typically the port attached to the antenna. The ESD rating of the device is ±125V HBM overall. This rating is associated with the control pin to RF port path. RF port to RF port/RF Gnd has been determined to be >±500V HBM for this technology. By using L_{ESD} as an RF choke on a port, an ESD protection to ±8kV contact discharge can be achieved.

5. The die may be attached by either conductive or non-conductive epoxy formulated for attaching semiconductor parts. The back of the die is electrically isolated from the switch circuit and can be grounded or left isolated.

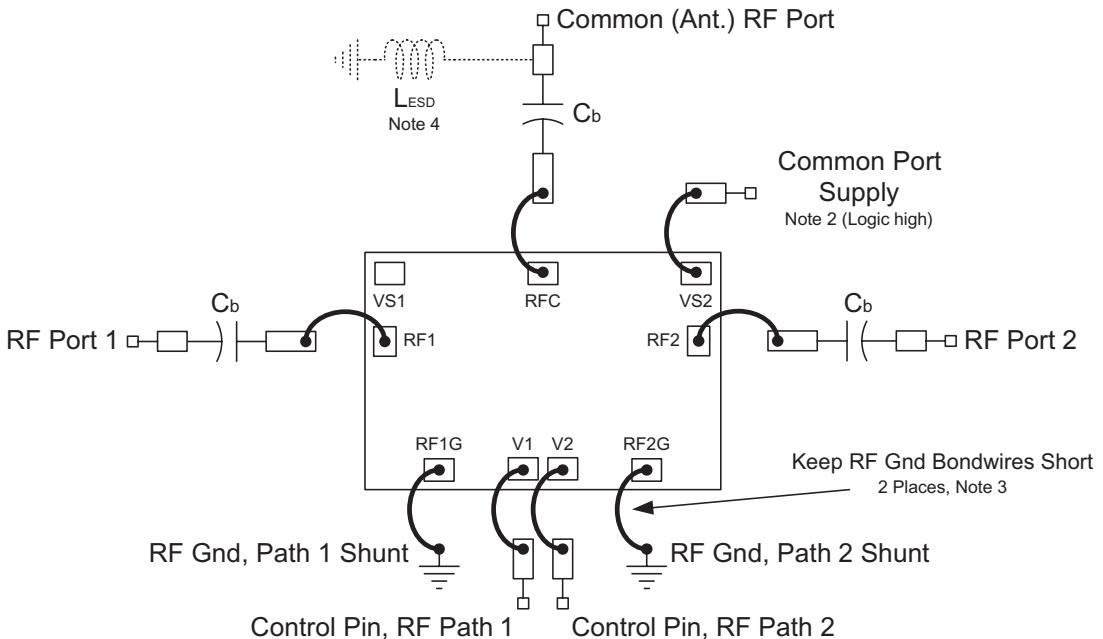

Figure 14: Unpackaged Die Application Schematic

Packaged Device Applications

External component requirements for the packaged AWS5522 device are shown in Figure 15, and application details are listed in the following notes:

1. C_b are DC blocking capacitors external to the device. A value of 100pF is sufficient for operation to 500MHz. The values may be tailored to provide specific electrical responses. The isolation of the switch provides enough decoupling of the RF1 and RF2 ports so that overall switch performance is not affected.

2. The VS2 pin provides a fixed voltage potential to the common port of the switch. To get the best linear performance, VS2 should be tied to the logic high voltage potential (not the power supply). Current draw on this pin is less than 5µA.

3. The RF Ground connections should be kept as short as possible and tied directly to a good RF ground for best broadband performance.

4. L_{ESD} provides a means to increase the ESD protection on a specific RF port, typically the port attached to the antenna. The ESD rating of the device is ±125V HBM overall. This rating is associated with the control pin to RF port path. RF port to RF port/RF Gnd has been determined to be >±500V HBM for this technology. By using L_{ESD} as an RF choke on a port, an ESD protection to ±8kV contact discharge can be achieved.

5. The large pad on the bottom of the package should be soldered to ground to assure proper performance of the device.

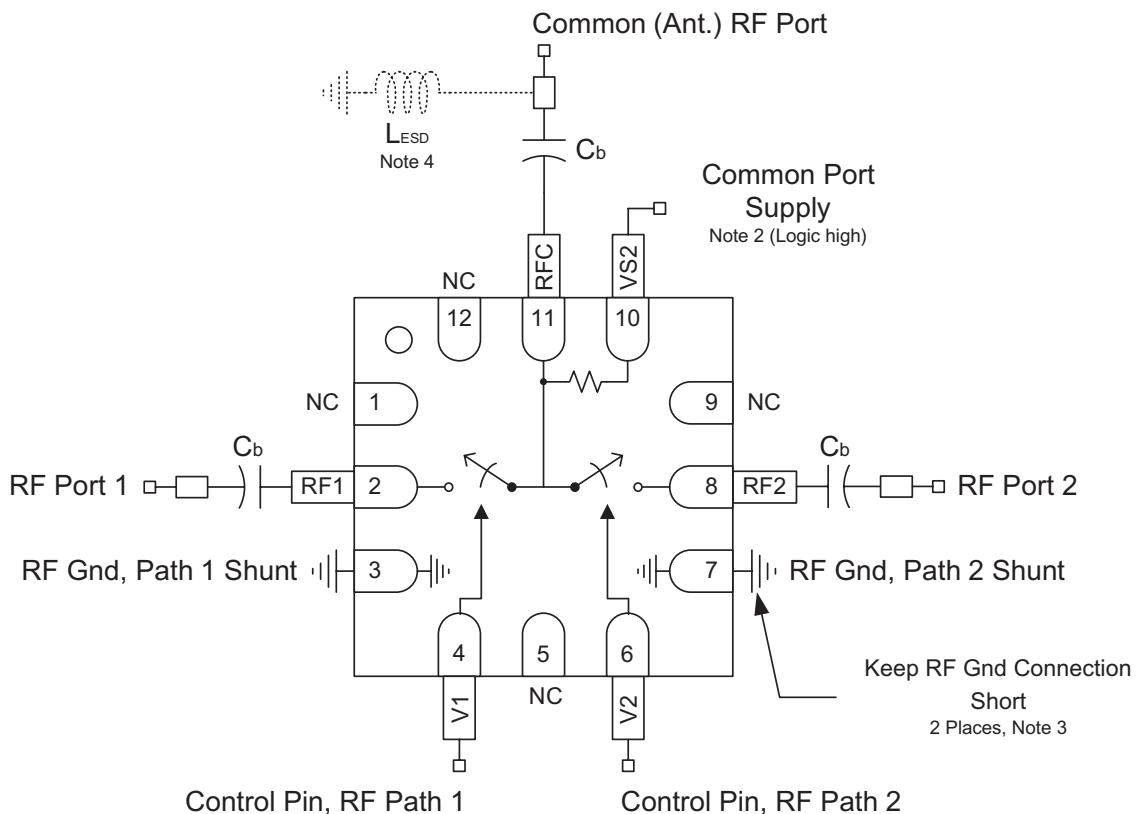

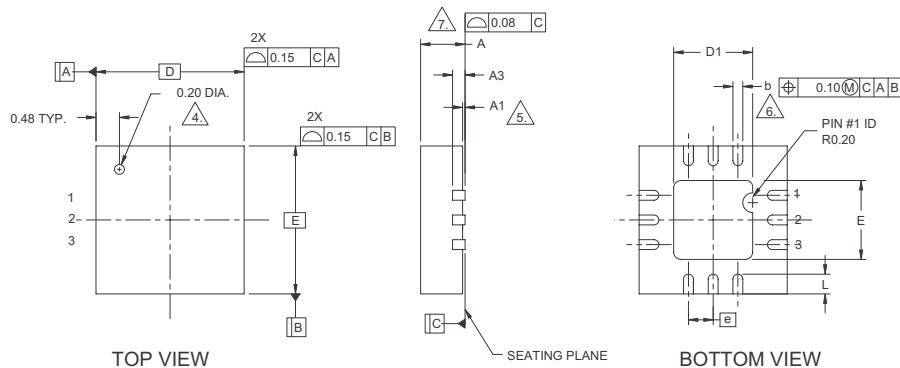

Figure 15: Packaged Device Application Schematic

NOTES :

1. ALL DIMENSIONS ARE IN MILLIMETERS.
2. MAX. PACKAGE WARPAGE IS 0.05 mm.
3. MAXIMUM ALLOWABLE BURRS IS 0.076 mm IN ALL DIRECTIONS.
4. PIN #1 ID ON TOP WILL BE LASER/INK MARKED.
5. APPLIED ONLY FOR TERMINALS
6. DIMENSION b APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.20 AND 0.25mm FROM TERMINAL TIP.
7. APPLIED FOR EXPOSED PAD AND TERMINALS.
EXCLUDE EMBEDDING EXPOSED PART FROM MEASURING.
8. REFERENCE JEDEC OUTLINE MO-220.
