

LVDT Voltage Module (LVM-110)

The popular **LVM-110**, low cost LVDT/RVDT signal conditioner has been re-engineered to improve performance and versatility.

The new LVM has increased LVDT drive current capability, to expand compatibility to LVDTs with lower input impedances.

The LVM -110 is designed to be a low-cost LVDT signal conditioning solution for OEM applications, and is compatible with most standard and special design Schaevitz LVDTs and RVDT's.

New DIP switches replace DIP jumpers, simplifying gain and frequency setup procedure.

The new discrete circuit topology is optimized for improved signal to noise ratio and tempco, while maintaining form, fit and function backward compatibility with previous versions.
