MSM548128BL

131,072-Word × 8-Bit High-Speed PSRAM

DESCRIPTION

The MSM548128BL is a 1-Mbit, high-speed and low power CMOS Pseudo Static RAM organized as 131,072-word × 8-bit.
The MSM548128BL is fabricated using silicon gate N well CMOS process. This process, coupled with single-transistor memory storage cells, permits maximum circuit density, minimum chip size, and high speed.
MSM548128BL has Self-refresh mode in addition to Address-refresh mode and Auto-refresh mode. In Self-refresh mode the internal refresh timer and address counter refresh the dynamic memory cells automatically. This series allows low power consumption when using standby mode with Self-refresh.
The MSM548128BL also features a static RAM-like write function that writes the data into the memory cell at the rising edge of $\overline{WE}$.
The MSM548128BL is pin compatible with CMOS static RAM and 256K pseudo static RAM.

FEATURES

- Large capacity : 1-Mbit (131,072-word × 8 bits)
- Fast access time : 70 ns max.
- Low power : 200 µA max. (standby with Self-refresh)
- Refresh free : Self refresh
- Pin compatible : SRAM, 256K PSRAM
- Logic compatible : SRAM $\overline{WE}$ pin, no address multiplex
- Single power supply : 5 V ±10%
- Refresh : 512 cycle/8 ms auto-address refresh
- Package compatible : SRAM standard package
- Package options:

32-pin 600 mil plastic DIP	(DIP32-P-600-2.54)	(Product : MSM548128BL-xxRS)
32-pin 525 mil plastic SOP	(SOP32-P-525-1.27-K)	(Product : MSM548128BL-xxGS-K)
		xx indicates speed rank.

ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings

Parameter	Symbol	Rating	Unit
Voltage on Any Pin from V_{SS} *1	V_T	–1.0 to 7.0	V
Power Dissipation	P_D	1.0	W
Operating Temperature	T_{opr}	0 to 70	°C
Storage Temperature	T_{stg}	–55 to 125	°C
Storage Temperature (biased)	T_{bias}	–10 to 85	°C
Short Circuit Output Current	I_{OS}	50	mA

*1 To V_{SS}

Note: 1. Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Recommended Operating Conditions

Notes:
1. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.
2. All voltages are referenced to ground.
3. I_{CC1} depends on output loading. Specified values are obtained with the output open.
4. An initial pause of 100 µs is required after power-up followed by more than 8 initial cycles before proper device operation is achieved.
5. AC measurements assume t_T = 5 ns.
6. t_{CHZ}, t_{WHZ} and t_{OHZ} define the time at which the output achieves the open circuit condition and is not referenced to output voltage levels.
7. In write cycles, the input data is latched at the earlier rising point of either $\overline{CE}$ or $\overline{WE}$. Write operation is achieved when both $\overline{CE}$ and $\overline{WE}$ are low.
8. The I/O state remains at high impedance after $\overline{CE}$ goes low if the transition occurs at the same time as or after the falling edge of $\overline{WE}$.
9. Use $\overline{WE}$ or $\overline{OE}$ or both signals to disable the output before input data is applied during a write cycle when the input is not the same.
10. Data input must be set to floating state before I/O becomes low impedance by $\overline{WE}$ or $\overline{OE}$ or both.
11. V_{IH} (Min.) and V_{IL} (Max.) are input timing reference levels for measurement. The transition time is measured between V_{IL} and V_{IH}.
12. 512-cycle refresh must be applied within 15 µs after the end of self refreshing to satisfy 512 cycles/8 ms.

Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.
Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
