*1 Radiant heating and forced air cooling should be considered. Sufficient space should be provided so that the base plate(aluminum surface) temperature is below 85°C when the surrounding environment is less than 60°C.

*2 Terminals should be wired as indicated below.

- When +S is not connected to the +terminal, and when -S is not connected to the -terminal, output voltage rises due to the sense amp open circuit. Output can then halt due to the overvoltage protection function. Also R_{v1} and R_{v2} should be left open if output voltage is not adjusted.

External trim	10kΩ	10kΩ	10kΩ	10kΩ
External resistance	1kΩ	5.6kΩ	10kΩ	27kΩ
