#### Description

Microprocessors and large ASICs frequently require two different but harmonically related frequencies. MF Electronics single-crystal, dual-frequency oscillators have been created for such applications. Designed to drive high capacitance (to 200 pf) MOS microprocessor loads, the dual oscillator family covers a 1 MHz to 16 MHz frequency range, and delivers frequency ratios from 2:1 to 4:1. When driving TTL loads, the upper frequency limit is increased fourfold over MOS loading frequencies.
