

PE430x Monolithic RF UltraCMOS™ Digital Step Attenuators

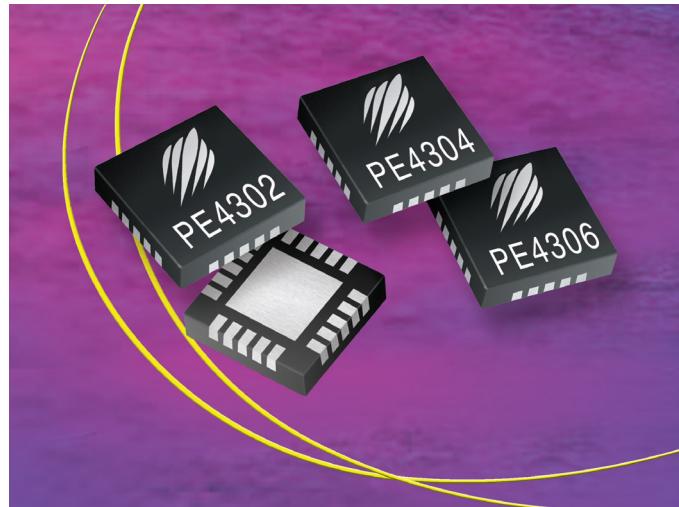

IP3 >50 dBm maintained from 1 MHz to 2.5 GHz

The PE430x family of Digital Step Attenuators (DSAs) features unprecedented levels of broadband linearity, attenuation accuracy and programming flexibility which provide exquisite design solutions for today's prolific RF applications. Peregrine's first commercial DSA product line has raised the bar on DSA performance. Manufactured on the Company's proprietary UltraCMOS™ silicon-on-sapphire process technology, the products draw from many years of high-performance RF CMOS and mixed-signal IC experience.

Specific capabilities brought to bear on the new DSA products from Peregrine Semiconductor include:

- ▶ Industry-leading attenuation accuracy
- ▶ High ESD tolerance
- ▶ Single +3.0 volt supply
- ▶ High linearity to near DC
- ▶ Serial and parallel interface logic
- ▶ Industry leading insertion loss of 1.5 dB
- ▶ Preset power-up attenuation states, a function afforded due to the monolithic CMOS fabrication process
- ▶ The PE430x DSAs are available in 20-lead QFN packages

The PE4302 and PE4304 devices are 50 and 75 ohm, 6-bit DSAs with a 0.5 dB LSB. **The PE4305 and PE4306** devices are 50 ohm, 5-bit DSAs with 0.5 or 1.0 dB LSB. **The PE4307 and PE4308** devices are 75 ohm, 5-bit DSAs with 0.5 or 1.0 LSB.

The extraordinary performance of the new Peregrine DSAs, including high accuracy and IP3 down to 100 KHz, makes them ideal for new designs. Return Loss (RL) for the PE4302 is better than 15 dB through 2.2 GHz, making it 5 to 6 dB better than its competitors and uniquely compatible with termination sensitive components. Compared to GaAs solutions, they offer higher IP3, accuracy, better temperature stability, lower distortion, ESD Protection, no blocking caps and lower power consumption. These aspects combine for optimal performance and cost-effectiveness.

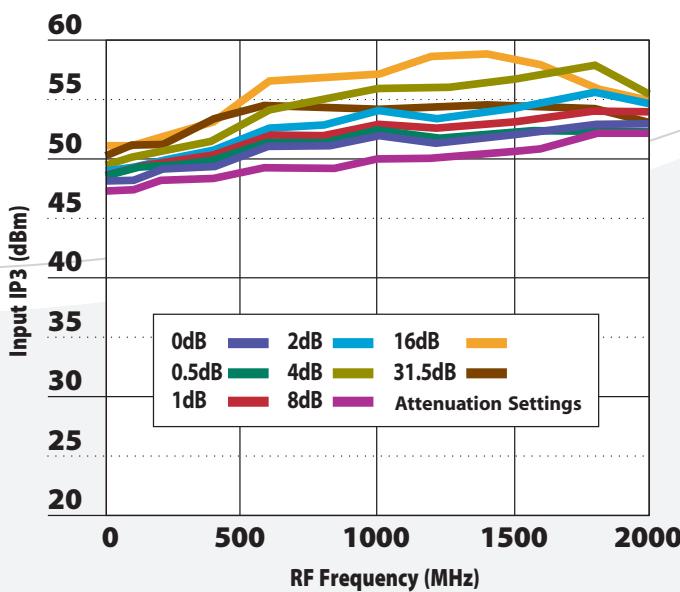

APPLICATIONS

The devices are ideal for many RF applications such as:

- ▶ Cellular base stations
- ▶ Fixed frequency transceivers
- ▶ Repeaters
- ▶ Power amplifier distortion canceling loops
- ▶ CATV headend and distribution systems
- ▶ High performance military radio

About UltraCMOS™ Technology

UltraCMOS™ mixed-signal process technology is a patented variation of silicon-on-insulator (SOI) technology. It is the first commercially qualified use of Ultra-Thin-Silicon (UTSi®) on sapphire substrates with high yields and competitive costs. Since sapphire is a near perfect insulator, UltraCMOS products can integrate high-quality passive devices directly into the IC, combining high-performance RF, mixed-signal, passive elements, nonvolatile memory and digital functions in a single device. UltraCMOS products are fabricated in standard high-volume CMOS facilities, achieving the economy, scalability and integration of CMOS, while enabling significant performance advantages over competing mixed-signal processes such as GaAs, SiGe BiCMOS and bulk silicon CMOS in applications where RF performance, low power and integration are paramount.
