

HIGH PRECISION C-MOS 3-TERMINAL VOLTAGE REGULATOR

■ GENERAL DESCRIPTION

The **NJU7221 series** is a high precision output voltage($\pm 2\%$) 3-terminal positive voltage regulator which contains internal accurate voltage reference, error amplifier, control transistor and output voltage setting resistor.

The regulation voltage is fixed by internal circuits and the following line-up of different output voltage versions are available.

The **NJU7221 series** is suitable for battery operated items and battery back-up systems because of low operating current and low dropout voltage.

■ FEATURES

- High Precision Output Voltage ($\pm 2\%$)
- Low Operating Current (19 μ A typ.)
- Low Dropout Voltage ($\Delta V_{IO} < 0.6V$, $I_O = 100mA$)
- Wide Operating Voltage Range
- Small Temperature Coefficient of Output Voltage
- Package Outline (TO-92/SOT-89)
- C-MOS Technology
