

Thyristors

logic level for RCD/ GFI/ LCCB applications

BT168W series

GENERAL DESCRIPTION

Glass passivated, sensitive gate thyristors in a plastic envelope suitable for surface mounting, intended for use in Residual Current Devices/ Ground Fault Interrupters/ Leakage Current Circuit Breakers (RCD/ GFI/ LCCB) applications where a minimum I_{GT} limit is needed. These devices may be interfaced directly to microcontrollers, logic integrated circuits and other low power gate trigger circuits.
