SiliconMAX™

Let's make things better.

PHILIPS

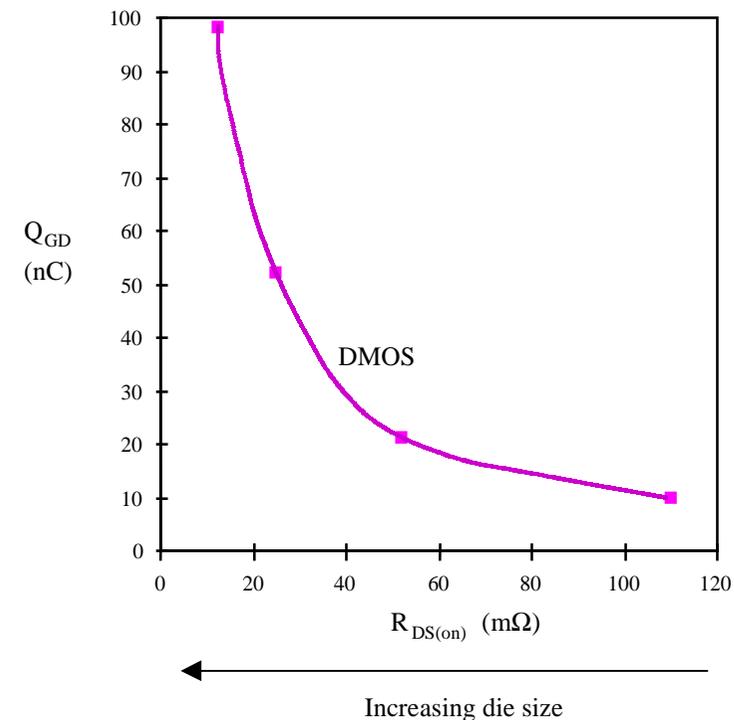

Bringing the advantages of ultra-low on-resistance ($R_{DS(ON)}$) and fast switching to applications up to 200V

- $R_{DS(ON)}$ values as low as
15 m Ω (max) in TO220 or D²-PAK at 100V
25 m Ω (max) in D-PAK at 100V
- Half the switching losses of existing 100V - 200V DMOS MOSFETs

Low $R_{DS(ON)}$ + low switching losses = low power dissipation = smaller package size

Conventional DMOS MOSFETs provide low $R_{DS(ON)}$ or fast switching not both

- low $R_{DS(ON)}$ demands increased die size
- for conventional DMOS technology, gate-charge (Q_{GD}) increases rapidly with increasing die size
- increased Q_{GD} means slower switching speeds

SiliconMAX™

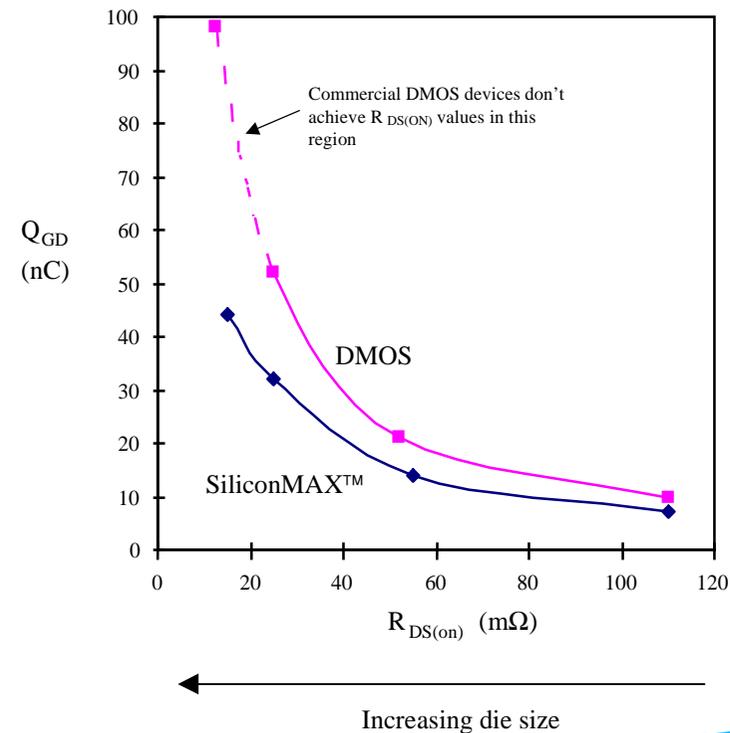

Let's make things better.

PHILIPS

SiliconMAX™ MOSFETs achieve the best of both worlds — low $R_{DS(ON)}$ and fast switching

- for SiliconMAX™ power MOSFETs, gate charge (Q_{GD}) increases much more slowly with die size
- lower Q_{GD} means faster switching speeds

SiliconMAX™

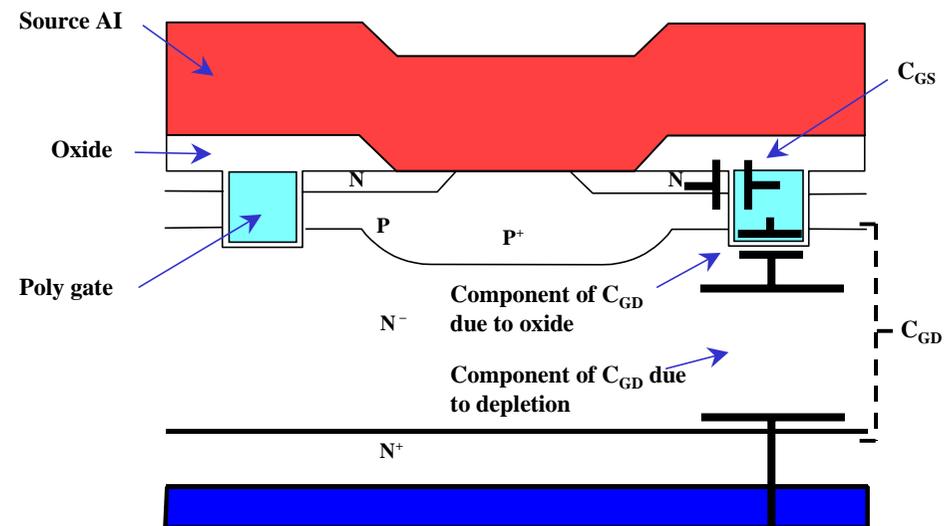

Let's make things better.

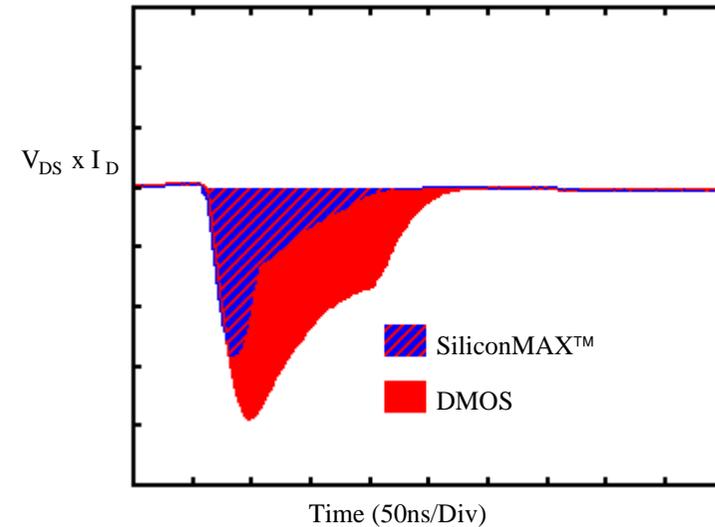

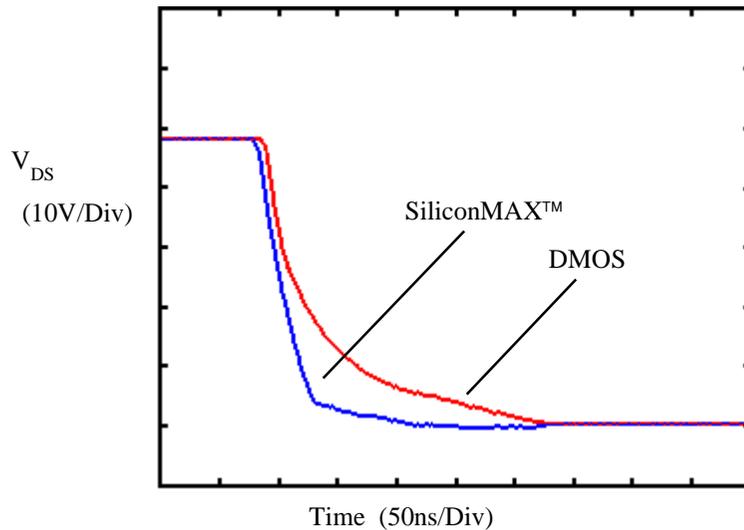

PHILIPS

TrenchMOS is the key to reduced gate-charge in SiliconMAX™ MOSFETs

- the vertical gate structure of TrenchMOS reduces gate-drain capacitance (C_{GD})
- reduced gate-drain capacitance reduces gate-charge

As a result, SiliconMAX™ MOSFETs

**switch several
times faster than
DMOS devices**

and

**exhibit half the
switching losses of
DMOS devices**

PHILIPS

Benefits of SiliconMAX™

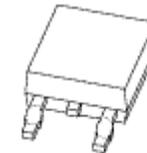

- lower $R_{DS(ON)}$ for the same size transistor package
- smaller package size for the same $R_{DS(ON)}$ value and/or reduced component count, resulting in greater power densities (W/mm^3)
- high-speed, low-loss switching performance
- replacement of through-hole mounting power packages with surface-mount devices

replace

TO220AB
(SOT78)

with

D-PAK
(SOT428)

- reduced heatsinking
- smaller size of end application
- lower system cost and higher performance

PHILIPS

SiliconMAX™ – fulfilling Philips’ EcoVision for a less power hungry world

- less power wasted in end-user equipment
- less energy/materials consumed during manufacture
- less energy/materials consumed during heatsink production
- less industrial waste
